SUMMARY

Results-oriented Software Engineer with strong proficiency in C++, Object-Oriented Programming, and Data Structures & Algorithms. Experienced in AI-integrated software development, RESTful API design, and system performance optimization. Adept at building reliable, scalable systems and validating software workflows, latency, and end-to-end functionality with a strong focus on engineering quality.

EDUCATION

Bachelor of Technology in CSE (AI)

NIET Greater Noida | CGPA: 8.29/10

Greater Noida, UP

2023 – 2027

Intermediate (Class XII)

GSAS Academy, Basti | Percentage: 75.6%

Basti, UP

2022 – 2023

High School (Class X)

GSAS Academy, Basti | Percentage: 88.33%

Basti, UP

2020 – 2021

TECHNICAL SKILLS

Programming Languages: C++, Python, JavaScript (ES6+), SQL

Testing & Development Concepts: API Testing, End-to-End Validation, Performance Testing, CI/CD Pipelines, SDLC

Frameworks & Tools: React.js, Node.js, Express.js, WebRTC, Socket.io, Git, Docker, GCP, FFmpeg, AI Coding Assistants

Core Computer Science: Data Structures & Algorithms (DSA), OOPs, Software Design Principles, DBMS, Operating Systems

PROJECTS

AI Short Video Ads Generator (MERN, Gemini API, FFmpeg)

[GitHub](#) | [Live](#)

- Engineered an automated video processing pipeline integrating **Gemini API** and **FFmpeg**, reducing rendering workflow time by **80%**.
- Developed and systematically validated RESTful APIs in Node.js to ensure reliability, correctness, and fault tolerance during heavy processing.
- Tested and optimized state management in React, improving UI responsiveness by **25%** under concurrent rendering loads.

Video Calling Interview Platform (MERN, WebRTC, Socket.io)

[GitHub](#) | [Live](#)

- Built a real-time communication application achieving **<200ms latency** using **WebRTC** and **Socket.io** for peer-to-peer signaling.
- Implemented secure **JWT-based** authentication and session validation, reducing unauthorized endpoint access risks by **99%**.
- Conducted interoperability and performance validation across low-bandwidth network scenarios to ensure seamless video streaming stability.

Payment Processing System (Node.js, Express, MongoDB)

[GitHub](#) | [Live](#)

- Architected an order lifecycle management service, improving transactional accuracy and workflow reliability to **80%**.
- Implemented automated failure recovery monitoring, analyzing root causes of state-transition errors and reducing processing failures by **40%**.
- Optimized **MongoDB** queries and database schema, achieving a **35% reduction** in API latency for large dataset operations.

ACHIEVEMENTS

- LeetCode:** Knight Badge holder; solved **700+** problems with a peak rating of **1900+** (**Top 5%** globally).
- CodeChef:** **3-Star** Coder (Max rating **1600+**); consistently ranked among the top 100 in divisional coding contests.
- Codeforces:** Achieved **1200+** rating, demonstrating advanced algorithmic problem-solving under time constraints.

CERTIFICATIONS

- Data Structures & Algorithms using C++** – Coding Blocks (Completed comprehensive program in advanced DSA and C++ concepts)
- Advanced Frontend (React JS), Node JS & Web Development** – Incapp (Completed offline classroom training in full-stack engineering)
